## Smart LED Lighting

Consumers all over the world are converting streetlights to low-energy Light Emitting Diode (LED) fixtures, and for good reason. LED's offer the highest energy savings of any light source available.

In addition, LED's emit directional light, which means more control over what is illuminated (streets and sidewalks) and what is not (the night sky).

Our LED bulbs are able to be used with commercial acorn and sphere globes as well as many residential cast aluminum light fixtures. Bulbs can also be used to retrofit existing HID ballast light fixtures.

## LED Energy Cost Savings & Return on Investment (ROI)

40 watt LED Replacement Bulb versus 175 watt Metal Halide Bulb.

### Metal Halide 175 Watt Bulb:

- Power Consumption: 210 watt (approx.)
- Note: Above results are estimated. Total power larger than lamp ratings due to ballast losses.*

VS.

### LED 40 Watt Bulb:

- Power Consumption: 41 watt max.
- Note: Actual measurements including self-ballast losses.*

### Energy Reduction = 169w/hr (210w of MH - 41w of LED Bulb)

- Daily Energy Reduction: 4.05KW (24 x 169/1,000 @ 24hrs/day)
- Yearly Energy Reduction: 1,478KW (4.05 x 365 days per year)
- Yearly Cost Savings: \$236.00 (1,478 x \$0.16/KW)**

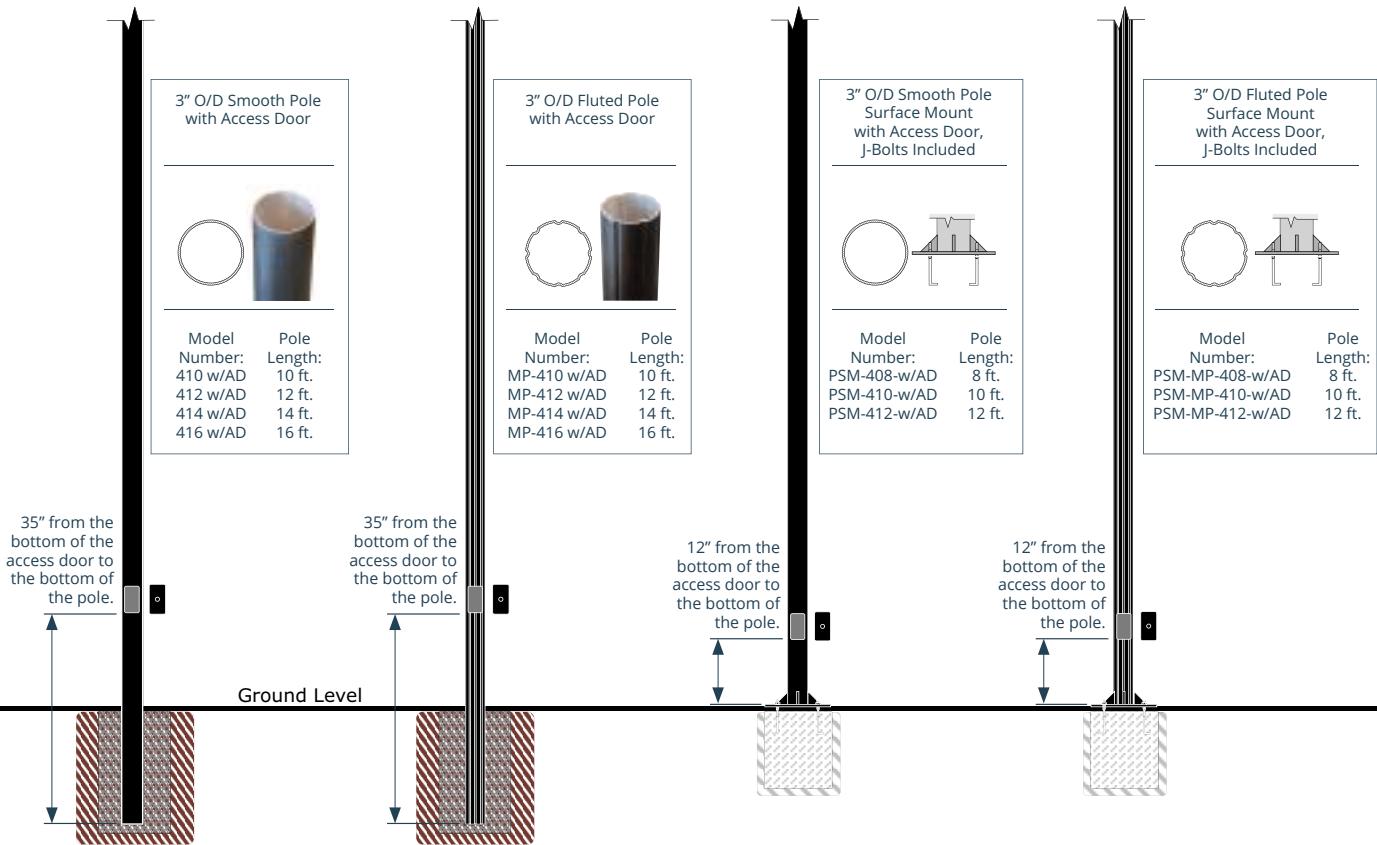

*Note: Calculated at 16 cents per KW*

**ROI: Approximately 2 years, operating at 12 hours per day.**
